### **Pump Instructions**

The pumps included with AeroMarine epoxies are designed to dispense equal volumes of liquid. When using with AeroMarine 300/21 you must pump two strokes of resin for every one stroke of hardener. Each stroke dispenses approximately one ounce of liquid.

The pumps need to be primed before the first use and if they have been stored for very long.

The pumps can be left on the containers for storage.

**For industrial or professional use only.**
